

## Construction Update: November 19, 2022

The contractor installed the Storm Trap detention structure at Historic Village Hall. The Storm Trap, included in the photos below, provides a cost-effective management solution to stormwater detention. Crews also completed the demolition of the existing Harrison Street bridge as well as installed the piles and constructed reinforcement bars for the new south abutment wall.

Over the next few weeks, the contractor will complete construction of the south abutment for the bridge. The contractor also plans to complete grading for the new sidewalk and curb as well as the storm sewer work at Historic Village Hall.

### **Harrison Street Bridge Closure Update**

Construction crews continue working on the replacement of the Harrison Street bridge. Due to a number of factors including the concrete shortage and unfavorable weather conditions, the Harrison Street bridge will remain closed over the winter. The safety of the residents and visitors and the quality of the final product were major factors in this determination. Work on and around the bridge is expected to continue through the winter as weather allows and the completion of the bridge is anticipated next spring. We appreciate your patience while this critical infrastructure improvement is made.
