

Construction Update: September 24, 2022

This week, the contractor completed demolition of the existing north abutment wall (abutment walls are the side walls that support the bridge) at the Harrison Street bridge. The contractor also completed the excavation, framing and installation of the reinforcement bars (rebar) for the footing beneath the new Redi Rock retaining wall on the north side of Crystal Creek. In addition, the contractor was able to drive H-Piles to support the new north abutment wall and the north side wing walls for the bridge.

Driving H-Piles

Next week, the contractor will complete framing and install rebar for the north abutment and center pier at the Harrison Street bridge. The contractor also plans to pour the footing and begin installation of the new Redi Rock retaining wall on the north side of Crystal Creek.

Harrison Street Bridge Closure Update

Construction crews are working to improve the Harrison Street bridge. Once crews are able to install the deck planks and pour the driving surface they will reopen the bridge temporarily. The bridge will be reclosed for several weeks in the spring for the final barrier wall, bike path and approach slab installation. Please note that the project schedule is weather dependent. We appreciate your patience while this critical infrastructure improvement is made.

More Progress! The land at 20 West Washington Street has received a fresh layer of asphalt pavement! Once the parking stall striping is complete the new parking lot will be complete.

WHAT ARE *Cofferdams*?

cof-fer-dam
/kōfər,dam

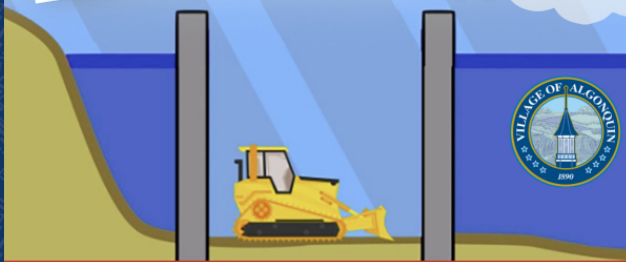

a watertight enclosure pumped dry to permit construction work below the waterline, as when building bridges

COFFERDAMS CREATE DRY CONSTRUCTION WORK AREAS

COFFERDAM BUILT AT MAIN STREET
